Summary

Backend-leaning software engineer. Founding engineer on an internal CRM, then sole engineer on a pricing engine now live for 90,000+ customers. I also build and run Hivemind, shared memory and task handoff for AI coding tools.

Experience

Associate Software Engineer Jul 2025 – Present
Enercare – TypeScript, NestJS, Azure Service Bus, MS SQL, Oracle, Salesforce, React *Markham, ON*

- Founding engineer on Compass, the internal React/TanStack CRM that 150+ retention agents use for 1,000+ customer interactions a day. Built UI features and the Azure infrastructure, and took it to production in 8 months.
- Moved to the Pricing & Offers program as its only engineer and designed the Discount Rules Engine (DRE). It integrates with client systems, checks each customer's eligibility by their attributes and the offer channel, and returns offers in the format each client expects.
- Shipped Launch 1 in 9 months: DRE now serves acquisition discounts in Salesforce and retention offers in Compass for 90,000+ customers.
- Modelled discount rules as data the business team edits instead of code, so new offers ship without a deploy. Rule-change overhead dropped by about 80%.
- Built the fulfilment pipeline on Azure Service Bus: 500+ signed rental agreements a day flow in, discounts apply automatically at equipment install, and each sale is recorded for reporting, at 99.9% uptime.
- Running post-launch hypercare and on-call; own the CI/CD in Azure DevOps and Azure Container Apps deploys.

Software Engineer Mentee Jan 2025 – Jun 2025
Architech – Python, LangGraph, FastAPI, PostgreSQL, pgvector, React *Toronto, ON*

- Built a LangGraph support agent for order lookups, refunds and CRM queries, with handoff to a human.
- Moved retrieval to pgvector with an HNSW index, bringing answers under one second at 90%+ accuracy.

Software Development Intern Apr 2024 – Aug 2024
J&M Group – Next.js, PostgreSQL, PostGIS, Docker Swarm *Toronto, ON*

- Designed a location-aware hiring system on PostGIS, shipped features for a Next.js PWA job board, and kept the self-hosted Docker Swarm cluster running.

Projects

Hivemind | *TypeScript, Bun, Cloudflare Workers, D1, Vectorize, MCP* | gethivemind.xyz 2026 – Present

- SaaS that gives AI tools one shared memory and lets one tool hand a task to another, then checks the result before it's accepted. Works with 13 coding tools over MCP plus chat apps.
- Retrieval runs BM25 and vector search in parallel, fuses them with RRF, reranks, then packs results into a fixed token budget. Scores 98.4% on LongMemEval single-session questions and uses 40x fewer tokens per question than sending the full chat history.

Clipper | *TypeScript, Python, Modal, Whisper, FFmpeg, Inngest* | github.com/0xadityaa/clipper 2025

- Open-source tool that cuts an hour-long video into 10+ subtitled vertical clips in under five minutes, using GPU jobs on Modal for transcription, highlight detection and FFmpeg editing. Built at a hackathon, then shipped.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL
Backend: Node.js, NestJS, FastAPI, Bun, REST, event-driven design, Azure Service Bus, Kafka, MCP
Data: PostgreSQL, MS SQL Server, Oracle, Redis, pgvector, Cloudflare D1, Prisma
Cloud & Tools: Azure, AWS, GCP, Cloudflare Workers, Docker, GitHub Actions, Azure DevOps
AI & Frontend: LangGraph, LangChain, RAG, hybrid search, evals; React, Next.js, TanStack, Tailwind

Education

Humber Polytechnic Toronto, ON
Post-Graduate Certificate, Information Technology Solutions *Jan 2023 – Aug 2024*

GLS University Ahmedabad, India
Bachelor of Computer Applications *Apr 2019 – Aug 2022*
